

Canopy IoT Platform

Canopy™ is an enterprise IoT platform that lets you centrally monitor, manage and control connected devices at scale. Its real-time dashboard, advanced features and configurable KPIs give you complete visibility into your network. Manage the overall health of your devices, address service issues before problems arise and delight customers with entirely new experiences.

Smarter Decisions. Better Uptime. Accelerate Innovation.

Connectivity

Connect to anything

Insights

Manage the overall health of your devices and utilize your data

Actions

- Capture
- Process
- React
- Automate

IoT Campaigns

Communicate with other devices to set off a campaign that can have tremendous impact on your operations

Introducing Leaf

Leaf, an easily extensible software agent, ensures secure device instrumentation within the Canopy IoT platform. It runs on any base operating system/device platform. Leaf can be leveraged to centrally manage distribution of software updates. Also, it allows an operator to securely and safely execute remote commands on devices.

Advantages of an IoT Platform

Enable Automation

Improve operational efficiency and deliver more personalized customer experiences.

Reduce Costs

Monitor component and system performance to improve uptime and field service operations.

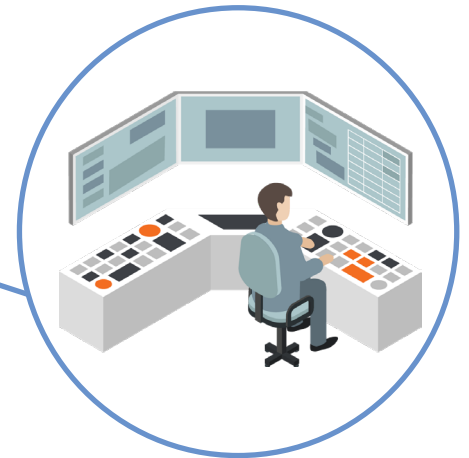

Generate Revenue

Enhance existing and create entirely new revenue generating opportunities.

Enhance Security

Gain real-time visibility to potential threats and leverage remote management to reduce risk.

Leverage Data

Maximize the utility of data through configurable KPIs, customizable dashboards, analytics and reports.
